US-08-920-296-2
Sequence 2, Application US/08920296
Patent No. 5846778
GENERAL INFORMATION:
Hawkins, Phillip R.
APPLICANT: Hawkins, Phillip R.
APPLICANT: Au-Young, Janice
APPLICANT: Au-Young, Janice
APPLICANT: Guegler, Karl J.
APPLICANT: Wilde, Craig G.
TITLE OF INVENTION: A NOVEL HUMAN MAP KII
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC

Patent No. 5801015

GENERAL INFORMATION:

APPLICANT: Cottarel, Guillaume
APPLICANT: Damagnez, Veronique

APPLICANT: Damagnez, Veronique

TITLE OF INVENTION: Cell-Cycle Regulatory Proteins from

TITLE OF INVENTION: Cell-Cycle Regulatory Proteins from

TITLE OF INVENTION: Cell-Cycle Regulatory Proteins from

TITLE OF INVENTION: 4 Human Pathogens, and Uses Related The

NUMBER OF SEQUENCES: 25

CORRESPONDENCE ADDRESS:

ADDRESSEE: Foley, Hoag & Eliot, Lid

STREET: One Post Office S....

CITY: Boston

STATE: MA

                                                                                                                                                                                                                                                                                              poly:peptide(s) having antigenicity of RESA or FIRA antigens of falciparum
Claim 4; Fig 1; 55pp; English.
The inventors claim a novel DNA molecule which comprises a nucleotide sequence corresp. to all or a portion of the base sequence coding RESA (N60472) or FIRA (N60473). RESA and FIRA antigenicity suitable for providing protective immunity against Plasmodium falciparum malarial infections.
Sequence 4590 BP; 1933 A; 437 C; 673 G; 1547 T;

Sacchromyces IAM4274 stalm 1; Page 2; 4pp; Japanese.

The sequence given encodes the 50kD subunit of endonuclease Scel.

Endonuclease Scel can be mass produced from the 50kD subunits expressed from the ENS2 gene. The 50kD subunit was purified by treating Scel from eg. Sacchromyces IAM4274, and by denaturing the protein and subjecting it to PAGE, or by chromatography on a sequence 1671 BP; 769 A. 100.

Example; Fig 13; 45pp; English.

A DNA sequence coding for a heterologous polypeptide which can be expressed in and secreted from filamentous fungi is claimed. Prefit the DNA sequence codes for bovine preprochymosin, M. meihei preprocarboxyl protease or A. niger preproglucoamylase. Also new are vectors consisting of the DNA sequence plus an operably-linked signal sequence. The vectors may also include a sequence which increases transformation efficiency, e.g. ANS-1.

Claim 7; Page 59-60; 84pp; English.
Human apolipoprotein B (apoB) scaffold attachment region (SAR) element clones Rh32 (T31530) and Rh10 (T31531) respectively carry the 3' human apoB SAR element and the distal 1212 bp 5' human apoB SAR elements
Co-map with the boundaries of the human apoB gene chromatin domain. A novel recombinant DNA molecule adapted for transfection

of a host cell comprises an erythropoietin (EPO) cDNA (T31529) (genomic clone (T31532) operably linked to an expression control sequence and to the 5' and 3' SAR elements. The SAR elements increase expression of the recombinant EPO in stable, long-term mammalian cell cultures.

Claim 4; Page 56-61; 96pp; English.

S claim 4; Page 56-61; 96pp; English.

This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to the Duffy binding like (DBL) family of genes which have homology to the Duffy antigen binding protein (DABP) and stalic acid binding protein (SABP) conserved regions (see T72889 and T72888 respectively). The var family of genes modulate cytoadherence and antigenic variation of Plasmodium infected erythrocytes. SABP and the Duffy antigen binding protein (DABP) are soluble proteins that appear in the culture supernatant after infected erythrocytes release merozoites. DABP and SABP carface. These proteins are necessary for erythrocyte invasion by the parasite. This sequence can be used in the compositions of the invention. The compositions are for the treatment and prevention of malaria, and compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective immune response in a mammal to plasmodium merozoites (especially right of the plasmodium merozoites (especially rights).
                                                                                                                                                                                                                                                                                                                                                                                                                                  ..

The sequence encoding the P195 protein of Plasmodium falciparum (N50530) and a peptide comprising at least one of its epitopes (see P50777) are claimed. Also claimed is a vaccine for inducing immunity to malaria comprising the novel peptide or P195 or a peptide comprising at least one epitope when derived from the nev DNA sequence, together with a carrier.

New transgenic fish - containing cells which contain an ornstruct comprising homologous expression sequences which direct construct comprising homologous expression product

Cell-specific expression of an expression product

Calim 13; Page 54-57; 69pp; English.

Craim 6ATA-1 (X08941) and GATA-2 (X08942) transcription factors are reteprized in processed in specific can be specific transcription factor. These transgenic can be used in plasmid constructs also comprising an expression product.

Craim 6ATA-1 (X08941) and 6ATA-2 (X08942) transgenes.

claim 9; Figure 3; 45pp; English.

The cloned xylanase coding sequence is derived from an anaerobic rumen fungus. The xylanase has high specific activity for the hydrolysis of xylan. It can be used for treating pulps in the pul hydrolysis of xylan. It can be used for treating pulps in the pul and paper industry, for treating bagasse for more efficient dispos or for the treatment of feedstock to improve nutritional value. Genetically modified xylanase genes can also be used for the modification of rumen bacteria to improve plant fibre utilisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      <u>1</u>

This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to the Duffy binding like (DBL) family of genes which have homology to the Duffy antigen binding protein (DABP) and stalic acid binding protein (SABP) conserved regions (see sepectively). The var family of genes modulate cytoadherence and antigenic variation of Plasmodium infected erythrocytes. SABP and the Duffy antigen binding C Plasmodium infected erythrocytes. SABP and the Duffy antigen binding C Plasmodium infected erythrocytes. SABP and the Duffy antigen binding C Supernatant after infected erythrocytes release merozoites. DABP and SABP CC mediate the binding of merozoites and schizonts to the erythrocyte surface. These proteins are necessary for erythrocyte invasion by the Sarasite. This sequence can be used in the compositions of the invention. The compositions are for the treatment and prevention of malaria, and compositions are used for the treatment and prevention of malaria. They genes having homology with conserved regions of DABP and SABP. The compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective immune response in a mammal to Plasmodium merozoites (especially Sequence 19124 BP), 7824 n.

```
A polypeptide comprising a Plasmodium falciparum (Pf) erythrocyte membrane protein 1 (PfEMP1) or active fragments or analogues of that protein can be used in the treatment or prevention of symptoms of a malaria parasite infection. The polypeptides can inhibit, block or reverse the sequestration of erythrocytes in patients suffering from malaria. Nucleic acids derived from the PfEMP1 gene can be used as probes and primers to identify a Plasmodium falciparum parasite, the primers used to generate characteristic amplification patterns from different P. falciparum strains. Antibodies specifically immunoreactive with the PfEMP1 polypeptide or its fragments may be used in diagnosis of malaria infection. This sequence encodes the PfEMP1 protein of the MC type of Plasmodium falciparum. An alternative, truncated version of the coding sequence (a cDNA clone) c is given in T41853.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8050

                                                                                                                                                               B30319

Casein kinase II (EC 2.7.1.-) alpha chain - rat (fragment)

C; Species: Rattus norvegicus (Norway rat)

C; Date: 31-Mar-1990 #sequence_revision 31-Mar-1990.#text_change 28-

C; Accession: B30319

R; Meisner, H; Heller-Harrison, R; Buxton, J; Czech, M.P.

Biochemistry 28, 4072-4076, 1989

A; Title: Molecular cloning of the human casein kinase II alpha-subu

A; Reference number: A90543; MUID:89323123

A; Accession: B30319

A; Molecule type: mRNA

A; Residues: 1-384 <MEI>

C; Superfamily: kinase-related transforming protein; protein kinase

C; Superfamily: heterotetramer; phosphotransferase; serine/threoni

F; 30-292/Domain: protein kinase homology <KIN>

F; 38-45/Region: protein kinase ATP-binding motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          :99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        #text_change
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels

J. Biol. Chem. 266, 2362-2368, 1991
A; Title: Casein kinase II. cDNA sequences, developmenta; Reference number: A38611; MUID: 91115855
A; Accession: A38611
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-391 < MAR>
A; Residues: 1-391 < MAR>
C; Superfamily: kinase-related transforming protein; plc; Superfamily: heterotetramer; phosphotransferase; S; 37-299/Domain: protein kinase homology <KIN>
E; 45-53/Region: protein kinase ATP-binding motif

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       testis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  casein kinase II (EC 2.7.1.-) alpha-1 chain - bovine
C; Species: Bos primigenius taurus (cattle)
C; Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change
C; Accession: S21335, A35206
R; Watanabe, M.; Yuge, M.; Maeda, O.; Ohno, S.; Kawasaki, H.; Suzusubmitted to the EMBL Data Library, October 1990
A; Description: Nucleotide sequence of CDNA for casein kinase II & A; Reference number: S21335
A; Molecule type: mRNA
A; Residues: 1-391 <WAT>
A; Biol. Chem. 265, 7638-7644, 1990
A; Liter Subunit structure of casein kinase II from bovine testis A; Reference number: A35206; MUID:90237072
A; Residues: 50-59;103-122;230-239;248-279;284-303 <LIT>
C; Superfamily: kinase-related transforming protein; protein kinase homeler: F; 37-299/Domain: protein kinase homeler: F; 45-53/Region: A27, Residues: exercity finase homeler: Right Residues: Res

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17;
                                                                                                                                                                                                                                                                                                                                                                                                                 c-Jun amino-terminal kinase (EC 2.7.1.-) 2 alphal - chicken
N;Alternate names: stress-activated protein kinase
C;Species: Gallus gallus (chicken)
C;Date: 02-Sep-1997 #sequence_revision 05-Sep-1997 #text_change 10-Jul-1998
C;Accession: JC5531
R;Ishikawa, T.; Nakada-Moriya, Y.; Ando, C.; Tanda, N.; Nishida, S.; Minatogawe Biochem. Biophys. Res. Commun. 234, 489-492, 1997
A;Title: Expression of the JNK2-alphal gene in the developing chick brain.
A;Accession: JC5531; MUID:97320448
A;Accession: JC5531
A;Status: nucleic acid sequence not shown
A;Molecule type: DNA
A;Residues: 1-382 <1SH>
A;Kesidues: 1-382 <1SH>
A;Cross-references: DDBJ:AB000807; NID:g1816447; PID:d1019937; PID:g1816448
C;Comment: This enzyme is involved in development of the central nervous system actors. It plays a role in the differentiation of central nervous system.
C;Genetics:
A;Gene: JNK2-alphal
C;Superfamily: unassigned Ser/Thr or Tyr-specific protein kinases; protein kinase homology <KIN>
F;24-278/Domain: protein kinase homology <KIN>
F;230/Active site: His #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            229
